

SUPPORTING DOMESTIC MANUFACTURERS OF PRINTED CIRCUIT BOARDS

THE MISSION

The Printed Circuit Board Association of America is a consortium of U.S.-based companies that support initiatives to advance the U.S. domestic production of microelectronics, specifically printed circuit boards, and the materials that comprise the boards.

These highly customized interconnected components are integral to functioning electronics systems, including those used in the military. Unfortunately, most printed circuit boards come from China, whose leaders hold the power to cut off supplies at any time.

Rather than stand on the sidelines, PCBAA is taking action in Washington D.C. to improve conditions for U.S. domestic manufacturers of printed circuit boards and their U.S. domestic supply chains. These actions are guided by PCBAA's three main mission objectives:

1

SUPPORT THE DOMESTIC
PRODUCTION OF PCBS

2

ENHANCE DOMESTIC
SUPPLY CHAIN SECURITY

3

ADVOCATE FOR INITIATIVES
THAT CREATE FAIR
MARKET CONDITIONS

THE PURPOSE

The Printed Circuit Board Association of America seeks to provide one voice for the PCB/PCBA industry.

We strive to educate, advocate, and legislate to raise awareness with decision-makers in Congress, the White House, the Department of Defense, and the rest of the Executive Branch about the domestic capabilities and resiliency of the printed circuit board and assembly industry for national security and economic purposes.

**PCBAA needs your help to fight for policies that will help U.S.
domestic microelectronics manufacturers.**
